

# PRAJAV KRISHNA S B

## Cybersecurity Analyst

+91 9385298352 | [prajavkrishnaofficial@gmail.com](mailto:prajavkrishnaofficial@gmail.com) | [LinkedIn: prajavkrishna-linkedin](#) | Nagercoil

Cybersecurity Analyst with hands-on experience in Security Operations Center (SOC), threat detection, log analysis, incident investigation, and security monitoring. Experienced in developing security-focused applications using Python, Flask, SQL, and Linux, with practical knowledge of SIEM concepts, Windows event monitoring, endpoint security, and digital forensics. Built enterprise-style cybersecurity projects including a cross-platform USB monitoring platform, an AI-powered SOC dashboard, and a password security toolkit. Passionate about Blue Team operations, incident response, and developing practical security solutions that strengthen organizational cyber defense.

### TECHNICAL SKILLS

#### Security Tools:

- Wireshark
- Autopsy
- Active Directory
- Burpsuite
- Sysmon
- Splunk
- EDR

#### Security Concepts:

- Threat Detection
- MITRE ATT&CK
- Network Traffic Analysis
- SIEM
- File Integrity Monitoring
- Windows Event Viewer
- TCP/IP analysis

#### Programming & OS:

- Linux
- Kali Linux
- Windows
- SQL
- Python Scripting
- Bash Scripting
- YARA

### PROJECTS

#### USBSHADOW – Cross-Platform USB Monitoring [GitHub: \(USBSHADOW\)](#)

- Designed and developed a cross-platform endpoint security platform to monitor USB device activity across Windows, Linux, and macOS in real time.
- Engineered a background monitoring agent with USB device fingerprinting, forensic evidence collection, activity logging, and automated incident scoring.
- Built a Flask-powered SOC dashboard with analytics, incident tracking, REST APIs, and SQLite/PostgreSQL integration for centralized security monitoring.
- Technologies: Python, Flask, SQLite, PostgreSQL, Docker, REST API, Git, Linux, Windows

#### SOC-DEADMAN – AI-Powered SOC Monitoring Dashboard [GitHub: \(SOC-DEADMAN\)](#)

- Developed an AI-powered Security Operations Center (SOC) dashboard to monitor, detect, and log simulated security events in real time.
- Built a Flask-based backend integrated with PostgreSQL/SQLite for centralized event logging, alert management, and incident tracking.
- Implemented automated detection workflows using Python, OpenCV, and YOLOv8 to identify suspicious activities and capture forensic evidence.
- Technologies: Python, Flask, OpenCV, YOLOv8, PostgreSQL, SQLite, Git, Linux, SIEM Concepts

### HANDS-ON LABS

- Performed packet analysis and network traffic investigation using Wireshark. Investigated simulated phishing and brute-force attack scenarios in lab environments.
- Practiced log analysis and security monitoring using Splunk and SIEM concepts.
- Solved cybersecurity and DFIR challenges on TryHackMe and Hack The Box.

### EDUCATION

#### Bachelor of Computer Applications (BCA)

Scott Christian College, Nagercoil | Aug 2022 – May 2025

### CERTIFICATION

- CERTIFIED ETHICAL HACKER (CEH V13) — EC COUNCIL
- CERTIFIED SOC ANALYST (CICSA) — RED TEAM HACKERS ACADEMY
- CERTIFIED INFRASTRUCTURE ANALYST — RED TEAM HACKERS ACADEMY
